

How to get off a Dead Horse

**Today, no one needs to die from malaria.
So why are they still dying?**

Presentation to Sen. Sam Brownbeck's staff
Larry Casazza, MD.MPH
Director , ACAM-African Communities Against Malaria
July 25, 2005

Current Situation

- ❑ Poor alignment among donors, governments, implementing NGOs and the communities they are trying to serve; lack of a common vision
 - ❑ At the household/community level, HIV/AIDS, Malaria and TB programming not integrated
 - ❑ Lack of cohesive planning to give incentives to private sector ITN producers for continued production
 - ❑ Insufficient collaboration among NGOS themselves and involvement of their potential networks
 - ❑ Families' knowledge and desire for ITNs bypassed
 - ❑ Governments lack a model for interaction with NGOS (and vice versa)
 - ❑ No leadership being offered by current "leaders"
-

Results

- ❑ Today, more than one million malaria - related deaths occur each year, mostly in Africa with 70% under five years of age
 - ❑ Access to ITNs falls markedly short of Abuja targets for 2005; GFATM disbursements lagging
 - ❑ Sustainability and ownership of programs missing; heavy “top-down” planning still persists
-

Where to go in the future

- ❑ Link the financial resources to a Shared Vision held by all key stakeholders at all levels
 - ❑ Initiate ways to direct support to already integrated successful Community-based approaches and motivate their scaling-up
 - ❑ Interject new Leadership to show a new way of thinking about development of health systems for HIV/AIDS, Malaria and TB programs
-

How this bill could build details for Next Steps

- ❑ Cultivate models for network building and their sustainability
 - ❑ Develop a shared governance framework for NGO collaboration and coordination
 - ❑ Exploit private sector partnerships that create win-win results
 - ❑ Grow a long-term vision that addresses simple business, management, and communication practices for effective aid distribution and technical updating
-
